ARMORER'S BENCH TECHNICAL MANUAL

Colt Python & Anaconda Revolvers

Colt's Manufacturing • The Rolls-Royce of Revolvers & 2020 Rebirth (.357 Magnum & .44 Magnum)

Manufacturer:	Colt's Manufacturing	**Category:**	Revolvers
Action Type:	Double-Action / Single-Action Revolver	**Era / Service:**	Golden Age Hand-Fitted to Modern CNC (1955–Present)
Calibers:	.357 Magnum, .38 Special, .44 Magnum	**Covered Models:**	Python (.357 Mag 4.25" / 6"), Anaconda (.44 Mag), King Cobra, Diamondback

KEY ARMORER TASKS & BENCH OPERATIONS

Core Procedures: V-Spring Hand-Fitting (Legacy Models) • Cylinder Bolt Drop Timing Adjustment • Bank Vault Cylinder Lockup Inspection • Rebound Lever Hand-Stoning • 2020 Leaf Spring Action Tuning

CRITICAL ARMORER TOLERANCES & SPECIFICATIONS

SPECIFICATION / CLEARANCE	ARMORER TOLERANCE & BENCH SPECIFICATION
BANK VAULT LOCKUP	Hand continues to press upward on ratchet at moment of hammer drop, completely eliminating cylinder play (0.000" rotational play when locked)
BARREL CYLINDER GAP	0.003" to 0.005" tighter factory tolerance than standard revolvers
LEGACY LOCKWORK	V-shaped flat spring powers both hammer and trigger rebound; hand-fitted by master Colt armorers
2020 REDESIGN	Streamlined lockwork with fewer parts, user-swappable front sights, and beefed-up topstrap with 30% more steel

IMMEDIATE ACTION & MALFUNCTION DIAGNOSTIC MATRIX

MALFUNCTION CONDITION	PROBABLE CAUSES	ARMORER BENCH REMEDY
Stoppage 1: Cylinder Bolt Drops Early (Ring Around Cylinder) Cylinder bolt drops onto cylinder circumference before entering leadoff lead-in groove, scratching line around cylinder	• Worn or improperly bent cylinder bolt spring / rebound lever arm. • Peened bolt cam wing on trigger side.	**Gunsmith Action: Stone the tail of the cylinder bolt where it rides the trigger cam. Bolt must drop smoothly into cylinder notch or lead-in flute without peening cylinder exterior.**

CURATED BENCH VIDEO REFERENCES

PROCEDURE TITLE	INSTRUCTOR / CREATOR	TECHNICAL PROCEDURE SUMMARY
Colt Python Action Lockwork & Timing Masterclass	Mark Novak / Anvil Gunsmithing	In-depth mechanical study of the classic Colt V-spring lockwork, hand timing, rebound lever tuning, and comparing the original to the 2020 Python design.
