M1 Carbine

Winchester / Inland / Rock-Ola / Underwood / Quality Hardware • U.S. Carbine, Caliber .30, M1 (Lightweight Tappet Gas Piston)

Manufacturer:	Winchester / Inland / Rock-Ola / Underwood / Quality Hardware	**Category:**	Rifles & Carbines
Action Type:	Short-Stroke Tappet Gas Piston Semi-Automatic	**Era / Service:**	WWII & Korean War (1942–1973)
Calibers:	.30 Carbine (7.62x33mm)	**Covered Models:**	M1 Carbine, M1A1 Paratrooper Folding Stock, M2 (Selective Fire), M3 Infrared

KEY ARMORER TASKS & BENCH OPERATIONS

Core Procedures: Gas Piston Nut Removal & Staking (18–22 ft-lbs) • Recoil Plate Tang Bedding & Screw Tension • Bolt Disassembly Tool (Extractor Plunger) • Magazine Catch Type 1 to 3 Upgrade • Slide Free Travel Check

CRITICAL ARMORER TOLERANCES & SPECIFICATIONS

SPECIFICATION / CLEARANCE	ARMORER TOLERANCE & BENCH SPECIFICATION
GAS SYSTEM	Short stroke tappet gas piston travel of only 0.14" striking the front of the operating slide
GAS PISTON NUT	Torque to 18 to 22 ft-lbs; stake nut rim into cylinder notch in two places with fine chisel
RECOIL PLATE SCREW	Torque securely into rear of stock; loose recoil plate causes wandering zero and cracked stock wrist
BOLT DISASSEMBLY	Requires dedicated M1 Carbine bolt disassembly tool to depress spring-loaded extractor plunger

IMMEDIATE ACTION & MALFUNCTION DIAGNOSTIC MATRIX

MALFUNCTION CONDITION	PROBABLE CAUSES	ARMORER BENCH REMEDY
Stoppage 1: Failure to Eject / Weak Extraction on Carbine Spent casing caught in slide or fails to kick out smartly to the 2 o'clock position	• Carbon seized around short-stroke tappet piston inside cylinder. • Worn extractor claw or fatigued extractor spring.	**Gunsmith Action: Unscrew gas piston nut using specialized M1 Carbine piston wrench. Extract gas piston, soak in carbon solvent, scrape carbon off piston face. Reassemble and stake nut.**
