Ruger American Rifle Series

Ruger • Power Bedding V-Block Precision Hunting Rifles (.308 Win, 6.5 CM, .223, 300 BLK)

Manufacturer:	Ruger	**Category:**	Rifles & Carbines
Action Type:	70° 3-Lug Full-Diameter Bolt Action	**Era / Service:**	Modern CNC Benchmark (2012–Present)
Calibers:	.308 Winchester, 6.5 Creedmoor, 5.56x45mm, 300 AAC Blackout, 7.62x39mm, 6.5 Grendel	**Covered Models:**	Ruger American Standard, Ruger American Predator (Threaded), Ruger American Ranch (AR Mag Compatible), Generation II

KEY ARMORER TASKS & BENCH OPERATIONS

Core Procedures: Power Bedding V-Block Wedge Torque (60–65 in-lbs) • Marksman Trigger Adjustment (3–5 lbs) • Dual Cocking Cam Lubrication • AR-15 Magazine Well Conversion • Barrel Nut Takedown

CRITICAL ARMORER TOLERANCES & SPECIFICATIONS

SPECIFICATION / CLEARANCE	ARMORER TOLERANCE & BENCH SPECIFICATION
POWER BEDDING	Patented stainless steel V-blocks molded into polymer stock positively locate receiver against recoil
ACTION SCREWS TORQUE	60 to 65 in-lbs front and rear screws; torque must be applied evenly to draw receiver into V-blocks
BOLT DESIGN	One-piece full diameter three-lug bolt with 70° throw and dual cocking cams for smooth opening
MARKSMAN TRIGGER	Adjustable trigger with safety blade adjustable from 3 to 5 lbs

IMMEDIATE ACTION & MALFUNCTION DIAGNOSTIC MATRIX

MALFUNCTION CONDITION	PROBABLE CAUSES	ARMORER BENCH REMEDY
Stoppage 1: Forend Touching Barrel (Loss of Free-Float) **Synthetic stock touches barrel on bipod pressure, creating vertical stringing on target**	• Flexible injection-molded synthetic stock dust cover bending under weight. • Uneven action screw torque tilting receiver in V-blocks.	**Gunsmith Action: Loosen action screws. Re-torque in steps to 60 in-lbs while holding barrel centered. Use Dremel or sanding drum to relieve plastic barrel channel until a dollar bill passes cleanly with bipod loaded.**
